

THERMOWELDABLE EXTRUDED BELT SPLICING KIT LP-9000

Accessories included:

- **LP-9003.** Welder with adjustable heat control from 100 to 400° C (40w-220/230v).
- **LP-9013.** Standard flat welder spatula (30 mm).
- **LP-9014.** Standard flat welder spatula (40 mm).
- **LP-9004.** Welding clamp for thermoweldable extruded belts, with spring pressure regulator.
- **LP-9001.** Scissors for cutting thermo-weldable extruded belts.
- **LP-9005.** Supporting mechanism for welding clamp.

All of the above comes in a strong PVC case, with foam padding on the inside, thereby ensuring that all they are well protected.

Kit characteristics:

The **LP-9004** welding clamp has been specially designed for the quick, secure welding of **esbelt** extruded belts. The trapezoidal vee-belts, round belts and ridge top belts can be welded, in any of their forms, with the **LP-9004** welding clamp.

The heat control and adjustment of the welder **LP-9003** in relation to the 30-mm flat tip **LP-9013**, or the 40-mm **LP-9014**, can be easily adapted to the specific energy requirements for welding **esbelt's** range of extruded belts.

The welding clamp **LP-9004**, aluminium made, gives a strong, reliable joint, ensures that the ends of the belt to weld are correctly aligned. It also enables the holding pressure to be adjusted, according to the dimensions of the belt being welded.

The supporting mechanism **LP-9005** for the welding clamp thereby permitting production line welding.
